

— VISION

Build the world's first reflection engine focused on making human reasoning visible rather than generating answers.

— PROBLEM

People naturally hold multiple perspectives when making decisions. Existing AI tools optimize for answers and recommendations, while the reasoning process often remains hidden.

— SOLUTION

ARC externalizes internal reasoning through structured dialogue between perspectives. Users explore competing motivations, assumptions, fears, and ambitions until clarity emerges.

— WHAT MAKES ARC DIFFERENT

Traditional AI helps users reach conclusions. ARC helps users understand how conclusions are formed. The product is not the answer; the product is increased awareness of the reasoning behind the answer.

— SPARK

A Spark is not a summary or recommendation. It is a connecting insight that emerges from the interaction of perspectives and helps users understand why they are leaning toward a particular decision.

— INITIAL PRODUCT

Web-based ARC experience. Users engage with ARC-0 and ARC-1 in a structured reflection session. The objective is not immediate answers but progressively clearer understanding.

— TARGET USERS

Founders, creators, students, professionals, and reflective thinkers facing meaningful decisions, uncertainty, or internal conflict.

— BUSINESS MODEL

● PHASE 1

Web subscriptions.

● PHASE 2

Offline/local runtime licenses.

● PHASE 3

Voice reflection experiences.

● PHASE 4

SDK licensing and ecosystem expansion.

— MOAT

ARC is built around a unique reflection methodology and interaction model. Rather than competing on model intelligence alone, ARC competes on structured self-awareness and decision ownership.

— LONG-TERM OPPORTUNITY

As AI becomes abundant, tools that help humans understand themselves may become more valuable than tools that simply provide more information.
